DETAILED ACTION

Allowable Subject Matter

1. Claim 13 is allowed.

The following is an examiner's statement of reasons for allowance: the prior art references either alone or in combination fails to disclose, teach or suggest a method of generating gas comprising: providing a pressure vessel containing a gas under a first predetermined pressure; providing an initiator housing having an opening at the inner end thereof closed by an initiator rupture disk constructed to rupture at a second predetermined pressure greater than said first predetermined pressure; said second predetermined pressure being sufficient to create a pressure wave that travels through said pressure vessel; providing a manifold having an opening closed by a manifold rupture disk constructed to rupture at a third predetermined pressure greater than said first predetermined pressure, said manifold rupture disk being directly exposed to the interior of said pressure vessel in the path of said pressure wave; and firing said micro-gas generator or initiator to increase the gas pressure in said initiator housing to a value equal to or exceeding said second predetermined pressure to rupture said initiator rupture disk and create said pressure wave that travels through said pressure vessel to impinge on said manifold rupture disk and create a localized pressure at said manifold rupture disk that equals or exceeds said third predetermined pressure to rupture said manifold rupture disk; wherein the flow of gas through said manifold upon rupture of said manifold rupture disk is at a temperature of less than approximately 21 °C.
